

TE-8105, an ultra-long-acting GLP-1 receptor agonist

1. Blood glucose levels in diabetic db/db mice (single dose)

2. Blood glucose levels in diabetic db/db mice (repeated dose, Q2D)

Blood samples for glucose measurements were taken prior to each GLP-1 injection

TE-8105 can better reduce blood glucose than Semaglutide, even at 10 nmol/kg dose
